

About MedEnvision

GIVING VOICE TO IDEAS AND ENVISIONING THE FUTURE

MedEnvision is a platform for Health Care professionals. The best ideas to increase efficiency, enhance comfort or to create savings often come from these professionals who experience inefficiencies in their daily routine. Unfortunately, these ideas mostly remain just good intentions.

Developing these ideas into a marketable product for medical use requires a specific expertise. The uniqueness of the MedEnvision team is that it features the various disciplines that require this expertise. From product ideation and designing over clinical validation to eventually commercialization.

EFFICIENT SURGERY

The operating theatre is the heart of a hospital. At the same time it is one of the most expensive resources, implying a direct impact on the hospital's profitability. By using new and innovative technologies, surgeries can be performed more efficiently and cost effective.

With the ESY-label (Efficient SurgerY) MedEnvision actively contributes to improve efficiency and therefore profitability in the OR. Instruments carrying the ESY-label are developed to simplify standard and more complex procedures without compromising on quality and safety.

EDA Academy™

A COMPLETE LEARNING JOURNEY TO MINIMISE YOUR LEARNING CURVE.

Each surgeon has got his own experiences, needs and specific OR set-up. Therefore, we feel that each learning journey should be tailor made so that all these different parameters can be approached accordingly based upon your needs. Each learning journey starts with dedicated preparation of all different steps when you want to introduce the **Efficient Direct Anterior (EDA)** THA into your hospital. We have created different programs that will be tailor made so they accommodate your needs and improve your EDA experience.

We have experienced that surgeons who come well prepared to the OR, benefit the most of these visitations. Therefore, preparation and intensive studying of the instructional material that we provide will be of utmost importance prior to your visit. Basic knowledge of the surgical applied anatomy, the OR set-up and the different steps of the procedure can be gained through our e-learning EDA Academy. Our EDA specialist will contact you and thoroughly discuss with you your needs and concerns. Together with him, you can set-up and prepare your learning journey. Visits to one or more surgeons, a (mini) fellowship, preparation of your own OR, cadaver sessions and revision surgeries are only examples of learning features that can be selected based upon your needs.

Start your journey now and register at www.MedEnvision.com

STANDARD PROGRAM

Initiation

To set up a tailor made package, it is important that we understand your current experience and expectations.

Therefore we ask all visitors to do some pre-visit preparation:

- Go through the literature MedEnvision will provide
- Go through the Surgical Technique
- Study the EDA stepwise introduction movie

Visitation

During your visitation of 8 to 10 EDA cases you will be exposed to:

- Stepwise surgical technique
- Focus on release sequence
- Tips & Tricks
- Q & A

Each visit will be tailor made upon your request and expectations.

EDA-kit

The EDA-kit allows the surgeon to perform the EDA technique with a minimum threshold. The kit contains:

- 2 EzySuits
- 1 Fixation set (reusable)
- 4 Grippers (single-use)

Introduction EDA in your own OR

The EDA specialist can visit you in your own operating theatre with treatment of 2-4 cases per day.

Possibilities during this day:

- Optimisation of your OR-setup
- Support with draping
- Guidance in the stepwise procedure during the first cases
- Optimal retractor positioning
- Training of your local scrub nurse regarding instrumentation
- Tips & tricks

ADVANCED PROGRAM

Multiple day visitation

It is possible to extend your experience visit experience further with training in surgical techniques such as:

- Extensile acetabular approach and revision
- Extensile femoral approach and revision
- PAO
- Hip Arthroscopy

Cadaver workshop

To promote your skills and to put the acquired knowledge into practice, we organize tailor made cadaver sessions.

- Hands-on training with one on one teaching
- Focus on specific needs and demands
- Step by step release sequence
- Optimal retractor positioning
- Training of your local scrub nurse regarding instrumentation
- Tips & tricks
